Period:

Newton's Second Law

3.3

Newton's Second Law:

The acceleration of an object is proportional to the force acting on it and inversely proportional to the mass.

Increasing force increases acceleration; increasing mass decreases acceleration.

$$a = 2 \text{ m/s}^2$$

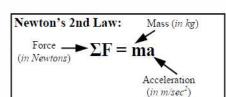

$$10 \text{ kg} \longrightarrow 20 \text{ N}$$

$$a = 1 \text{ m/s}^2$$

$$20 \text{ kg} \longrightarrow 20 \text{ N}$$

More
$$m = less a$$
, given same force.

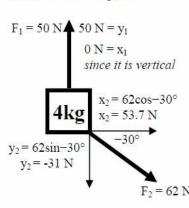

Force equals mass times acceleration.

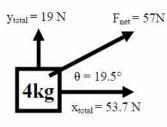

Net Force—Fnet

We know that the acceleration is due to ALL of the forces acting on an object. The net force is the total of all of the forces. If there are forces in both dimensions, just do vector addition, as before.

1. Resolve into components

2. Calculate Fnet

$$F_{net} = \sqrt{53.7^2 + 19^2}$$

$$F_{net} = 57 \text{ N}$$

$$\theta = \tan^{-1} \left(\frac{19}{52.7} \right) = 19.5^{\circ}$$

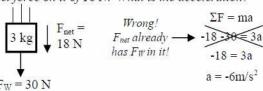

3. Use $\Sigma F = ma$. 57 = 4a

$$57 = 4a$$

$$a = \frac{57}{4} = 14.25 \text{ m/s}^2$$

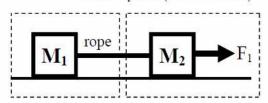

If F_{net} is given, then F_{net} takes the place of all of the forces (ΣF). Ex: A 3 kg object is falling and has a net force on it of 18 N. What is the acceleration?

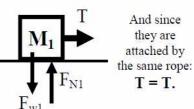

Force Diagrams

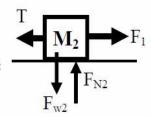

A force diagram shows all of the forces acting on an object. If there are multiple objects in a system, you must draw a separate force diagram for each individual object.

Entire System (without friction)

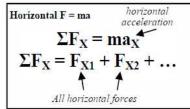

Individual Force Diagrams

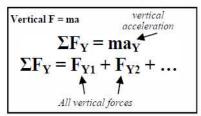

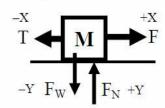

Max and May

If there are forces in both the x and y-directions, we know that we must work in the x and y-directions independently. $\Sigma F = ma$ will look different in each direction and for each situation.

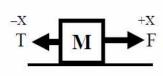

Step 1—Draw the force diagram for the object.

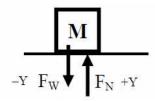

Step 2—Write the horizontal equation:

$$\sum \mathbf{F}_{\mathbf{X}} = \mathbf{m} \mathbf{a}_{\mathbf{X}}$$
$$\mathbf{F} - \mathbf{T} = \mathbf{m} \mathbf{a}_{\mathbf{X}}$$

Step 3—Write the $\Sigma F_Y = ma_Y$ vertical equation: $F_N - F_W = ma_Y$

Make sure you show all your work on the problems below

 $(\sum F=m \bullet a)$ to fill in all blanks. Use the approximation that $g = \sim 10 \text{ m/s/s}$.

C. 0.10 N m=10000 kg m=800 kg a = 6.0 m/s/s, upa = 8.0 m/s/s, down $\Sigma F =$ $\Sigma F =$ d. f. e. $F_{norm} = 9000 \text{ N}$ nozm=10 000 N ₂₀₀=10 000 N $F_{grav} = 9000 \text{ N}$ TTI= m=0.500 kg **a**= a = 1.50 m/s/s, right $\Sigma F = 124 \text{ N, right}$ $\Sigma F =$ $\Sigma F =$ i. g.
