

Name: _____

Period: _____

Physical vs. Chemical Changes and "The Code"

Write in your "best" definition

Chemical Reactions

Physical vs. Chemical Changes

Physical change –

Frozen water

Liquid water

Chemical change –

Wood

Smoke

Ashes

Evidence (Data) of a Chemical Change

Bubbles –

Turns cloudy –

Temperature changes –

Exothermic

Endothermic

Color changes –

Change in smell or taste –
(SEE WARNING!) →

Chemical Reactions can be dangerous! Mixing Ammonia and Chlorine bleach (common cleaners) make poisonous chlorine gas! Also, bleach and vinegar make poisonous mustard gas!

If you mix chemicals and notice a chemical change: be safe, get out! You may have made something dangerous.

Your tongue and nose are VERY sensitive and accurate chemical detectors, BUT BE VERY CAREFUL: some chemicals can be harmful or even fatal.

Waft, Don't Smell! - Use your hand to waft (wave) some of the smell toward you, if you are instructed to smell a chemical by your teacher.

Reading the Chemical Reaction "Code"

$2\text{Li}_3\text{N} = \text{Li}_3\text{N} + \text{Li}_3\text{N} =$
2 Lithium Nitride molecules =

Reactants produce Products

$\text{Be}(\text{NO}_3)_2 = \text{Be}(\text{NO}_3)(\text{NO}_3) =$

Combination	Color Change?	Precipitate Formed?	Temperature Change?	Gas Produced?	Chemical or Physical Change?
1					
2					
3					
4					
5					
6					
7					
8					

1. Physical change	A. When heat is produced in a chemical reaction.	1. Precipitate	A. A safer way to smell chemicals.
2. Chemical reaction	B. The chemicals before the reaction.	2. Wafting	B. Tells you the number of molecules.
3. Endothermic	C. When chemical bonds are broken and new substances are formed.	3. Ammonia	C. Will produce a poisonous gas when combined with Chlorine bleach.
4. Exothermic	D. A chemical reaction that gets cold.	4. Coefficient	D. Means "produces" or "creates".
5. Reactants	E. The chemicals created in a reaction.	5. Arrow	E. Tells the number of atoms of a particular element in a molecule.
6. Products	F. Changes appearance only.	6. Subscript	F. When a solid "falls out" of a liquid when a reaction occurs.

Evidence of a Chemical or Physical Change?

<input type="checkbox"/> Bubbles are formed.	<input type="checkbox"/> Changes temperature
<input type="checkbox"/> Melting wax	<input type="checkbox"/> Cutting up
<input type="checkbox"/> Gets cold	<input type="checkbox"/> Evaporating something
<input type="checkbox"/> Color changes	<input type="checkbox"/> Ripping paper
<input type="checkbox"/> Boiling water	<input type="checkbox"/> Gets hot
<input type="checkbox"/> Changes smell	<input type="checkbox"/> Sugar dissolves
<input type="checkbox"/> Breaking glass	<input type="checkbox"/> Burning gasoline

Evidence of a Chemical or Physical Change?

<input type="checkbox"/> Chewing food into smaller pieces.
<input type="checkbox"/> When acids in your stomach break down your food into nutrients your body can absorb.
<input type="checkbox"/> When enzymes in your saliva pre-digest and soften your food in your mouth before you swallow.
<input type="checkbox"/> Tearing food with your teeth.
<input type="checkbox"/> The complete act of digestion (all of the above).

What two sets of household chemical must you NEVER mix together? Be sure to give what they create.

Endothermic or Exothermic Reaction?

<input type="checkbox"/> An activated heat pack?
<input type="checkbox"/> Two chemicals are mixed and get hot?
<input type="checkbox"/> Two chemicals are mixed and get cold?
<input type="checkbox"/> Heat goes into the reaction?
<input type="checkbox"/> An activated cold pack?
<input type="checkbox"/> Heat comes out of a reaction?

Why are smelling or tasting chemicals dangerous?

If you HAD to smell a chemical, how would do it?

Is dissolving salt into water a physical or chemical change? (Be sure to give proof one way or the other.)

How many total molecules are there?

<input type="checkbox"/> 4H ₂ O	<input type="checkbox"/> 3Be ₂ Br	<input type="checkbox"/> 5CO ₂
<input type="checkbox"/> 8NaCl	<input type="checkbox"/> 2O ₂	<input type="checkbox"/> MgS

How many total atoms are there?

<input type="checkbox"/> 4H ₂ O	<input type="checkbox"/> 3Be ₂ Br	<input type="checkbox"/> 5CO ₂
<input type="checkbox"/> 8NaCl	<input type="checkbox"/> 2O ₂	<input type="checkbox"/> MgS

$\text{Li}_2\text{O} + \text{MgCl}_2 \rightarrow 2\text{LiCl} + \text{MgO}$

Name the second reactant: _____

Name the first product: _____

How many Lithiums on the product side? _____

$2\text{K}_3\text{N} + 3\text{CaCrO}_4 \rightarrow \text{Ca}_3\text{N}_2 + 3\text{K}_2\text{CrO}_4$

Circle the second reactant. Underline the first product.

How many potassium atoms on the reactant side: _____

How many oxygen atoms on the product side? _____

$2\text{AlCl}_3 + 3\text{Na}_2\text{CO}_3 \rightarrow \text{Al}_2(\text{CO}_3)_3 + 6\text{NaCl}$

Circle the first reactant. Underline the second reactant.

How many Sodium atoms on the reactant side? _____

How many table salt molecules on the product side? _____

$\text{Fe}_2\text{O}_3 + 3\text{C} \rightarrow 2\text{Fe} + 3\text{CO}$

Circle and Name the second product: _____

How many total atoms on the reactant side: _____

How many total molecules on the product side: _____
